

Workshop on Cloud Computing Rationalization

Abstract:

This workshop will provide participants with an overall understanding of the Cloud computing so that they are able to start using and adopting Cloud Computing services and tools in their real life scenarios. The workshop will also enable participants exploring some important cloud computing driven open source systems such as OpenStack, OpenNebula and CloudStack and other businesses cloud applications. The workshop will also discuss on Cloud Application Deployment Considerations, Identity and Access Management, Security, Privacy and Risks and also discuss on how to build dedicated and hosted private cloud solutions to optimize IT service delivery and to secure key components of your private cloud implementation.

Highlights of the workshop on Cloud Computing:

- Characteristics of Cloud Computing
- Cloud Computing Architecture Layers
- Cloud Application Deployment Considerations
- Business Aspects of Cloud Computing and Adoption
- Cloud Computing: Security, Privacy and Risks
- Cloud Computing: Identity and Access Management
- Implementing a Private Cloud Solution
- Cloud Computing: Case Studies
- Conclusion
